

ToLetNest: Master Presentation & Defense Guide

One Ecosystem, Two Apps | MERN Web Portal + React Native Mobile App

Presenter: Wasiur Rahman | **Evaluation Date:** August 31, 2026

1. Executive Architecture Overview

ToLetNest is a full-stack, cross-platform ecosystem designed to solve the urban bachelor and student accommodation crisis in major cities (e.g. Dhaka). It bridges Landlords and Tenants through a unified MongoDB database:

- **Landlord Web Portal (Next.js 14 / React 18):** 1-minute smart listing posting, transparent utility cost breakdowns, and live inquiry management.
- **Tenant Mobile Client (React Native):** 1-Tap GPS Proximity Radar, cross-area search, smart filtering, in-app voice calling, and one-tap 'Close Chat' anti-harassment shield.
- **Shared Backend & Database:** MongoDB + Mongoose ODM with 2dsphere spatial coordinates and automatic in-memory fallback store.

2. Slide-by-Slide Banglish Presentation Speaking Script

Slide 1: Introduction

"Assalamu Alaikum / Good morning everyone. Today I am presenting ToLetNest — a Hyperlocal Smart To-Let and Roommate Finder. Eita ekta 'One Ecosystem, Two Apps' architecture-e toiri kora hoyeche, jekhane single MongoDB backend theke Landlord Web Portal ebong Tenant React Native Mobile App communicate kore."

Slide 2: Problem Statement

"Dhaka shohore bachelor ba student-der basha khuje pawa extreme hassle. Facebook group-e hazar hazar unverified post thake, basha bhara 7000 bolleo utility bill mile 10500 hoye jay, ebong 15-20 jon bariwala-ke call dile personal phone number leak hoye jay. Ei problem solve korar jonnoi amra ToLetNest build korechi."

Slide 3: System Architecture

"Amader system-e 3-ti layer ache: MongoDB with 2dsphere spatial indexing for instant radius queries, Landlord Next.js Web Dashboard for 1-minute listing posting, ebong React Native Mobile App for 1-tap nearby GPS radar."

Slide 4: Transparent Pricing Engine

"Bariwala 3-ti mode-e bill set korte paren: Itemized breakdown (Electricity 600, Gas 250, Water 200, WiFi 150), All-inclusive fixed bundle, ba Contact for bills. App-e direct dekhay: Base Rent 8500 + Utilities 1450 = Total 9950/mo."

Slide 5: Privacy Shield & In-App Call

"Amader key innovation holo Privacy Shield: Tenant-ke bariwala-r shathe kotha bolar jonno SIM phone number share korte hoy na. App-er bhitore thekei direct voice call chole. Negotiation pochondo na hole 'Close Chat' button chaple communication permanently block hoye jay."

Slide 6: React Native Mobile Core

"Mobile app strictly React Native-er pure primitives (View, Text, FlatList, TouchableOpacity, Modal, StyleSheet) diye toiri kora hoyeche density-independent pixel standard maintain kore."

Slide 7: Database & Mongoose Schemas

"Next.js App Router-e connection leak thekate global.mongoose singleton caching use kora hoyeche. Mongoose Pre-Save middleware automatic itemized utility sum kore totalUtility calculate kore."

Slide 8: Live Product Demo

"Live demo-te amra dekhaschi: Landlord dashboard theke Bashundhara Block C-te to-let post korar shathe shathe Mobile App radar sweep hoye '350m away from NSU' badge shoh real-time sync hoye gelo."

Slide 9-10: Key Lessons & Conclusion

"Ei project theke Full-stack state lifting, GeoJSON spatial queries, ebong React Native native layout-er core competencies achieve korechi. Thank you everyone!"

3. Line-by-Line Code Defense & Interview Answers

Q1: Why use global.mongoose in lib/mongodb.js?

Answer: "Next.js Fast Refresh dev mode-e file reload hole normal variable recreate hoye connection pool overflow hoye database crash korto. global.mongoose use korle connection pool server context-e cache hoye reuse hoy."

Q2: What is the purpose of the 2dsphere index in Listing.js?

Answer: "2dsphere index MongoDB-ke spherical Earth coordinates (longitude, latitude) index korte sahajjo kore. Jar phole \$near spatial query diye 1 km radius-er basha millisecond-e search kora jay."

Q3: How does the radar calculate distance without Google Maps API?

Answer: "Amra mathematical Haversine Formula use korechi. Eita user-er GPS coordinates ebong property coordinates-er spherical difference theke 100% free-te exact distance (e.g. 0.35 km / 350m) calculate kore."

Q4: Why use FlatList instead of array.map with div in React Native?

Answer: "React Native-e HTML DOM div thake na. FlatList 'Virtualization' kore shudhu viewport-er card render kore, phole 1,000 to-let thakleo mobile app smooth thake ebong memory leak hoy na."

Q5: How does 'One-Tap Close Chat' protect user privacy?

Answer: "Conversation status 'closed_by_tenant' hoye jay. API layer ebong UI state-e validation thakay landlord ar kono unsolicited call ba message pathate pare na."
